

How to combine watch and armsleeve? Choose the Compressport Armsleeve Watch Space!

There are two ways of wearing a watch and an armsleeve at the same time:

With the watch under the armsleeve, but you have to lift the armsleeve to check the time...

With the watch over the armsleeve, but if you want to take off the armsleeve (if it's too hot, for example) you must first remove the watch...

And this is not always practical and safe when you're running or cycling...

This is no longer a problem thanks to the Compressport Armsleeve Watch Space.

Easy...

Thanks to its clever design the Armsleeve Watch Space is put on and removed as easily as a regular armsleeve.

It's too hot? The armsleeve is removed without having to remove the watch...

It's too cold? The armsleeve is easily put on and the Watch Space automatically positions around the watch.

... safe...

You no longer need to lift the armsleeve to check your watch.

Thanks to the Armsleeve Watch Space you can check the time, control your speed and monitor your progress as if there was no armsleeve!

... and for all watches!

The Watch Space adapts itself to all watches regardless of size and shape.

PRORACING ARMSLEEVE Watch Space
